

# The New 40.9 In-Meeting Experience

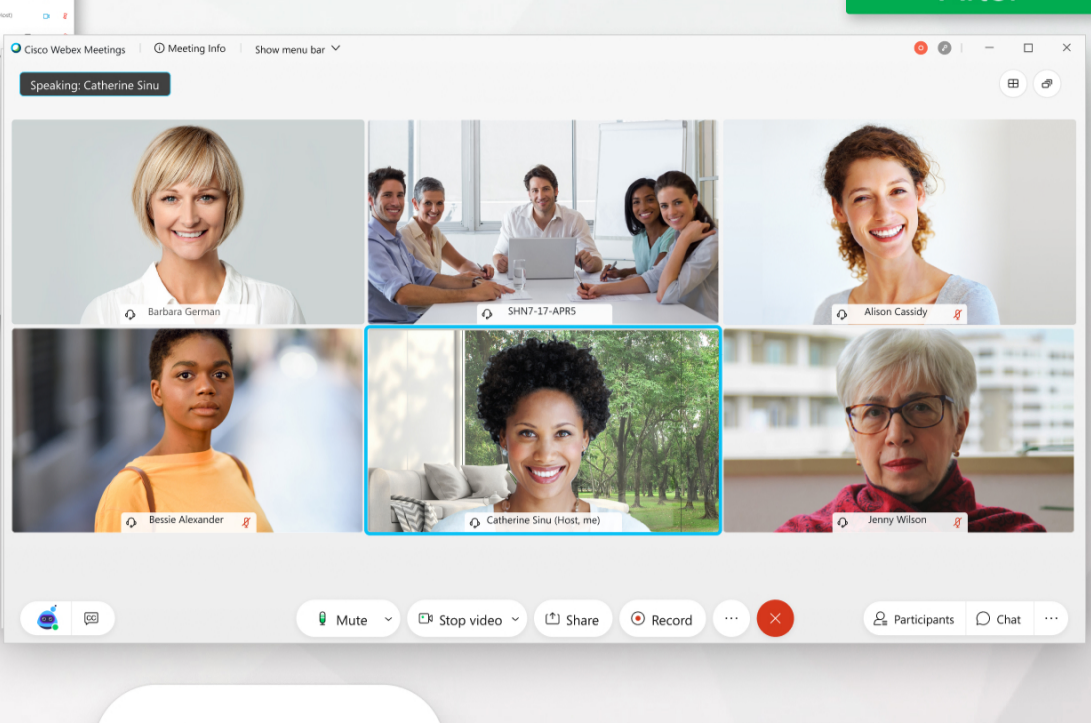

for

Webex Meetings

Before

After

Meeting features are easier to find at a glance.

Mute

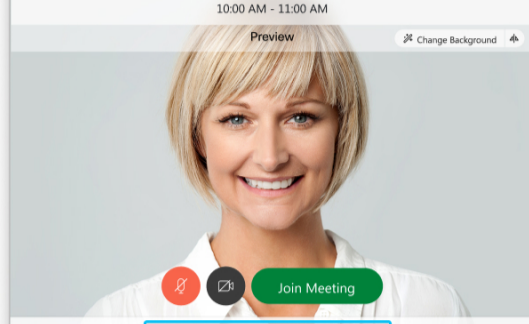

Participants Chat

Stop video

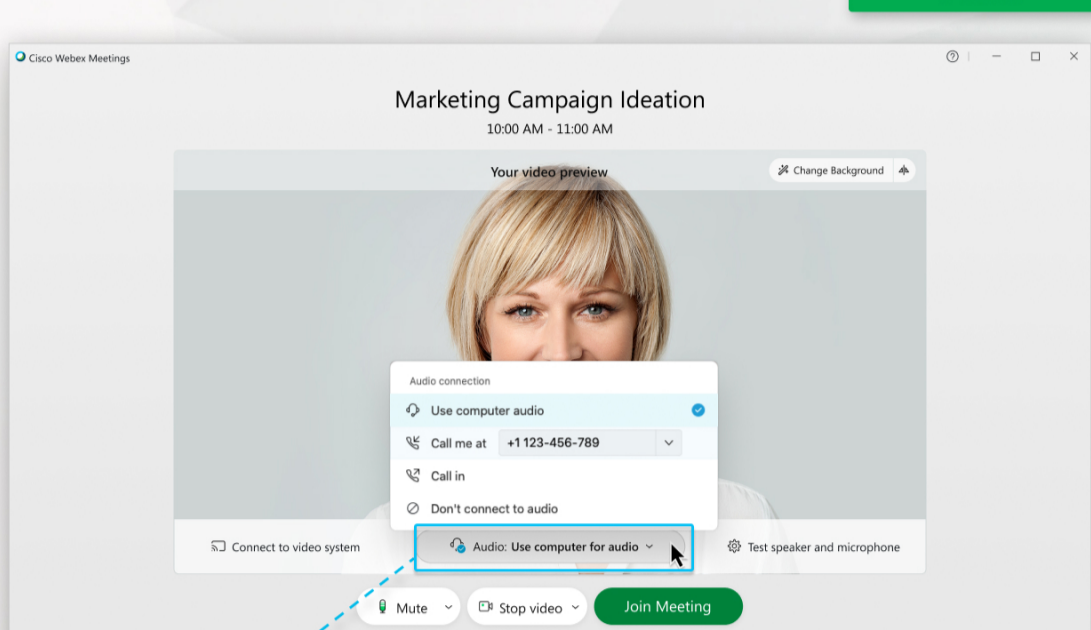

## Optimized Audio and Video Preview

We've made previewing your audio and video settings before joining more intuitive.

Before

After

Before, you may have clicked **Join Meeting** before seeing the audio options below it.

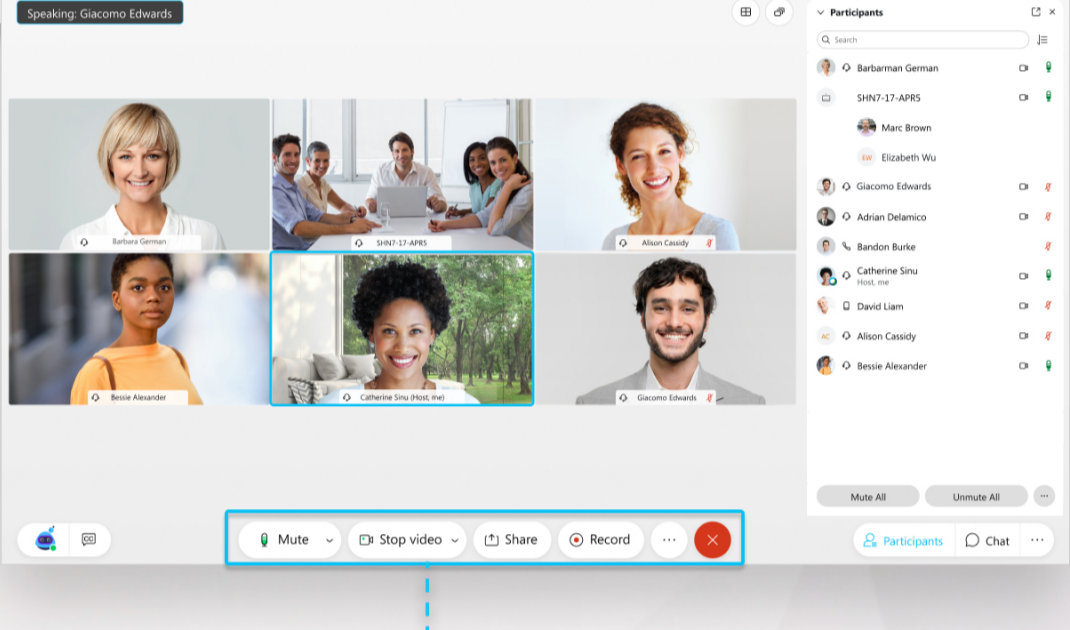

Now, the audio selection menu appears first. And with the larger preview window, you can make sure you look your best when joining a meeting.

## Easy-to-find Meeting Controls

Mute Stop video Share Record

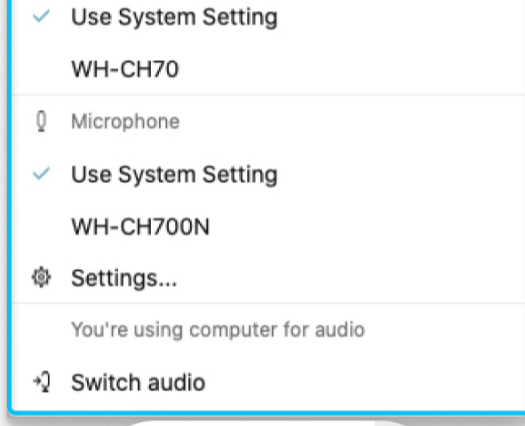

Essential meeting controls are always available where you need them.

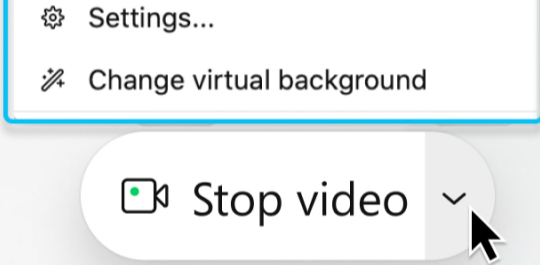

After

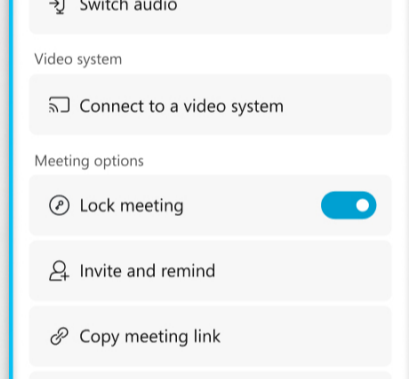

Options now have contextual menus.

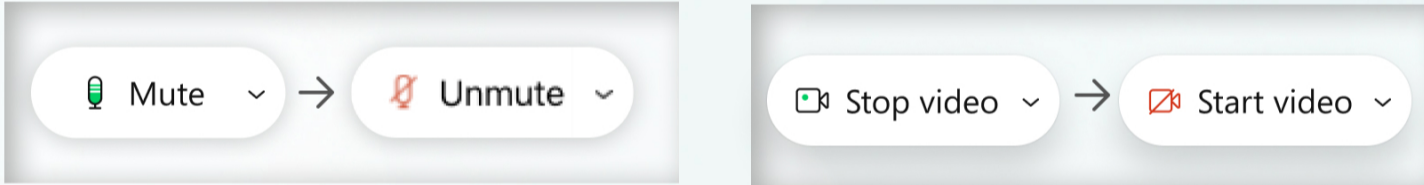

Adjust your audio device and settings. See when you're speaking.

Change your video camera and virtual background.

Invite others, lock meeting, and more.

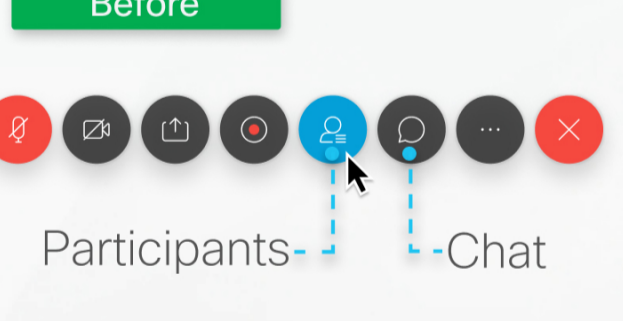

Now it's easier to see when your microphone and video camera are on.

## Consolidated Panel Controls

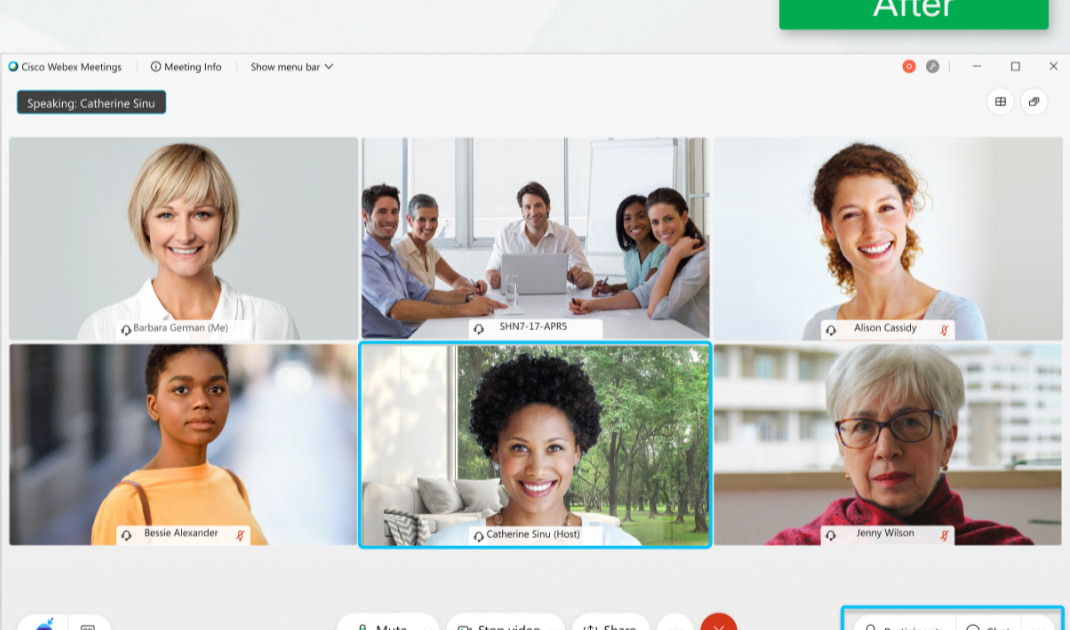

Participants Chat

We've consolidated the panel controls, making it easier to access panels like **Participants** and **Chat**.

Before

After

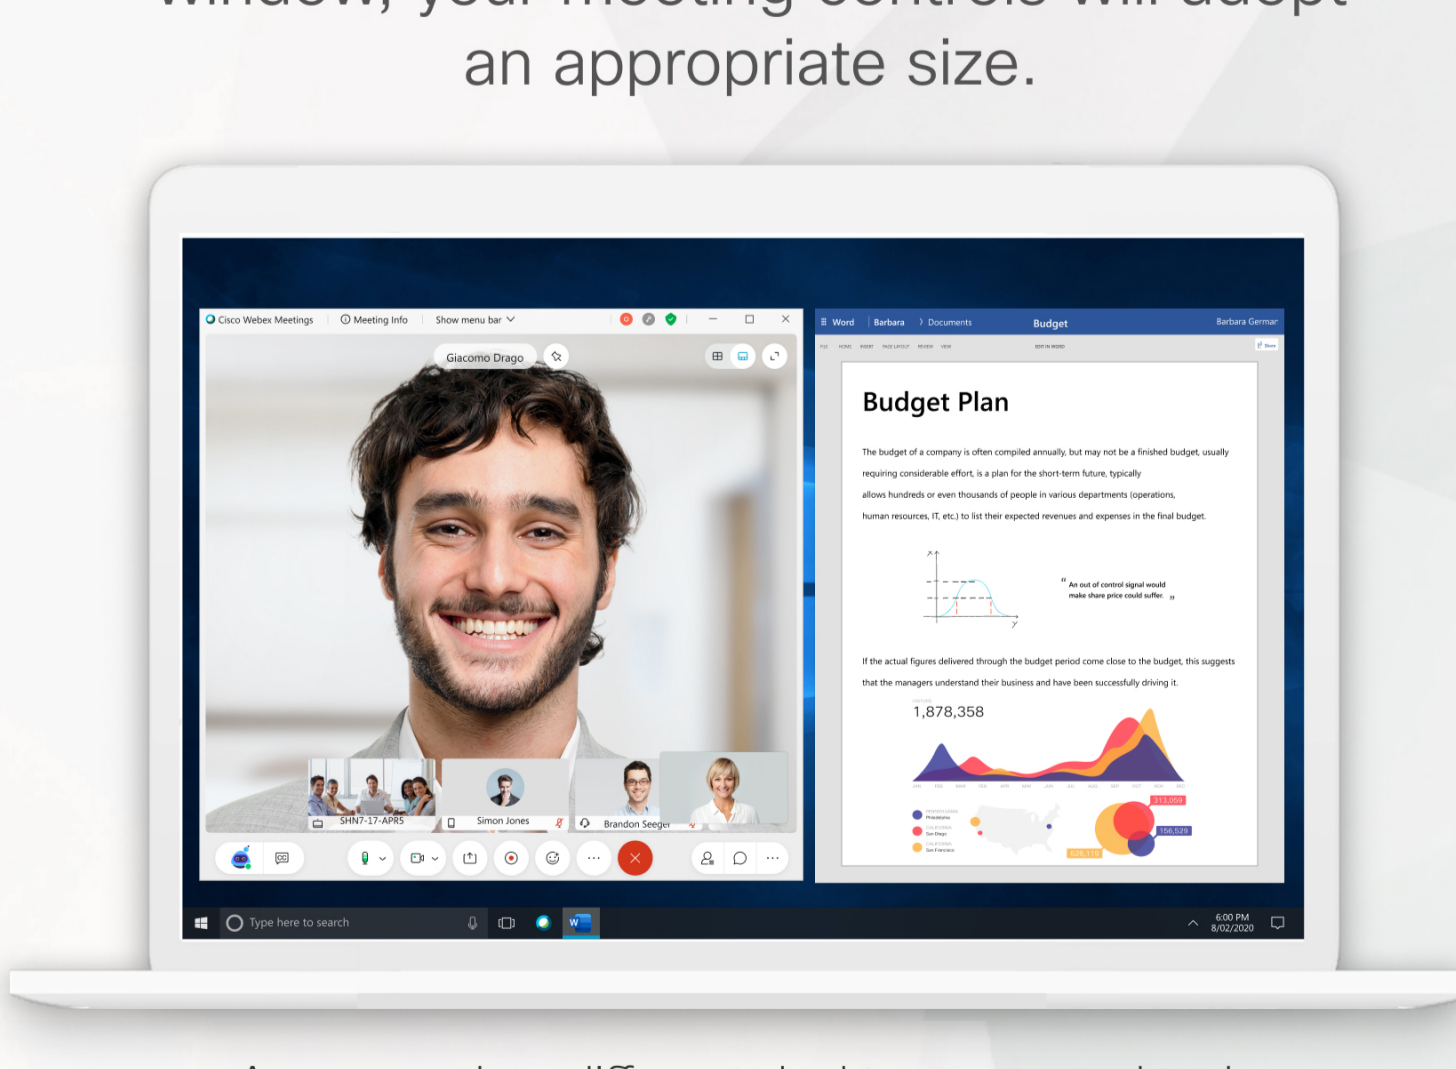

Quickly open and close the **Participants** and **Chat** panels directly from the meeting controls.

Click **More** to see other available panels.

## Controls that adjust with your window size

Stop video

Now, when you resize your application window, your meeting controls will adopt an appropriate size.

Accommodate different desktop apps and tasks with your screen's extra real-estate, all without losing sight of your meeting controls.

Stay tuned to learn more about the new experience.
