COVID 19 Discharge instructions

[] CONFIRMED POSITIVE: COVID 19 Discharge instructions: Patients with Novel Coronavirus (COVID-19)

Routine, Normal, You've been diagnosed with a viral syndrome and have a virus referred to as SARSCoV-2, otherwise known as the Novel Coronavirus (COVID-19).

We have notified the local health department where you reside that you were confirmed to have COVID and hospitalized and now are being discharged from our facility. You will need to have a negative result before being released from home quarantine.

You will be contacted by your local health department after discharge for follow up.

In the meantime:

Please follow these precautions:

--- As advised by the Centers for Disease Control and Prevention (CDC), we recommend you stay in your home (quarantine) and minimize contact with others to avoid spreading an infection.

--- Separate yourself from other people and animals in your home as much as possible. Stay in a specific room and away from other people in your home. Use a separate bathroom if possible. Do not handle pets or other animals while sick.

--- Avoid sharing personal household items, such as dishes, glasses, eating utensils, towels or bedding. After using these items, they should be washed thoroughly with soap and water.

--- Clean all "high-touch" surfaces every day (e.g., counters, tabletops, doorknobs, bathroom fixtures, toilets, phones, keyboards, tablets and bedside tables). Also, clean any surfaces that may have blood, stool, or body fluids on them. Use a household cleaning spray or wipe and follow the instructions on the label to ensure safe and effective use of the cleaning product.

--- Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, clean your hands with an alcohol-based hand sanitizer containing at least 60% alcohol, covering all surfaces of your hands and rubbing them together until they feel dry. Soap and water should be used if hands are visibly dirty. Avoid touching your eyes, nose, and mouth with unwashed hands.

--- Cover your mouth and nose with a tissue when you cough or sneeze. Throw used tissues in a lined trash can and immediately wash or clean your hands as outlined above.

--- If your symptoms worsen and you have trouble breathing, chest pain, are unable to eat or drink enough and/or have severe vomiting, diarrhea or weakness, you may need to return to the emergency department or contact your clinic provider for re-evaluation. When seeking care at a healthcare facility, put on a facemask before you enter the facility.

If you experience any of these symptoms,

- Severe shortness of breath
- Persistent pain or pressure in the chest
- New confusion or inability to arouse
- Bluish lips or face

Call 911 and notify the dispatch personnel that you have COVID-19. If you decide to go to the ER directly yourself, call them before you arrive and let them know you have COVID-19. Wear a facemask when you enter.

Only call your local health department and/or Employee Health after you've called 911 if you experience any emergency warning signs.

Follow Up Appointments (Selection Required)
