

For All Outpatient Clinicians

New Outpatient Epic Wound Care Module Successfully Launches at HMB, HMH, HMSL, HMW/HMCCH and HMWB Outpatient Clinics

Earlier this week, the new Epic Wound Care module successfully launched at HMB, HMH, HMSL, HMW/HMCCH and HMWB outpatient clinics. The new module enhances current wound LDA documentation, streamlines workflows and provides continuity of care in Epic for our wound care patients. Now, clinicians systemwide can quickly see a patient's full health care picture — improving treatment and outcomes.

April Sooknanan, system director for wound care services, explains, "Many of our patients have comorbidities that impact wound healing. If we're only getting part of that information and not seeing the full picture, it's hard to give the best treatment plan. Now, with Epic wound care, both inpatient and outpatient are equipped to see the full picture and drive better patient outcomes."

The Epic Wound Care module launched earlier this month for inpatient nurses and therapy staff.
